Subject: Request for new hearing; Lahaina waste water injection well

Dear Ms. Rumrill,

June 23, 2009

I am writing to request a new hearing regarding the Lahaina wastewater injection well, and also thank you for all the good work you have done so far. We truly appreciate the new nitrogen standards and time table. This should help us with the algae problems on our reefs.

There are new concerns about the efficacy of "R-1" treatment. There is a question which has arisen as to the sufficiency of the UV/chlorination treatment.

Further it seems to me that down stream monitoring of the product water is necessary until Maui County does away with the practice altogether; as is the newly stated goal of the Mayor and the County.

I would also like to see the County post the results of their monitoring efforts on their website so we can keep track of progress. In my opinion monitoring should be on a daily basis.

It seems to me that a 10 year permit is too long. Two and a half years would coincide with the R-1 requirements and the reduced nitrogen standards.

Thank you for your efforts and I hope we can see you here for another hearing.

John Seebart
